

BUSINESS REQUIREMENT DOCUMENT

Credit Card Management System

1. Project Overview

Objective

The objective of this system is to manage credit card issuance, usage, billing, and monitoring for customers under a single-card-per-customer model.

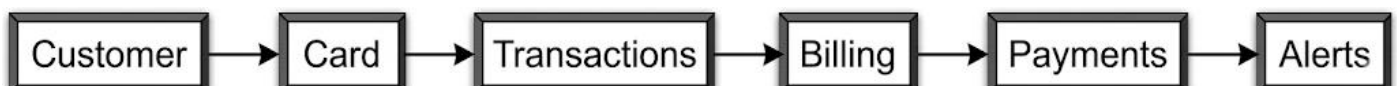

The system will:

- Register customers
- Issue one credit card per customer
- Allow card upgrades (replace existing card)
- Track transactions and billing
- Monitor outstanding and risks

2. Stakeholders

<u>Role</u>	<u>Responsibility</u>
Admin (Bank)	Define rules, card types, limits
Customer	Apply for card, use card, make payments

3. System Architecture Overview

4. Module Mapping

<u>Module</u>	<u>Description</u>
Customer Management	Customer Onboarding, Customer data handling
Card Management	Card Generation, Card lifecycle
Authorization	Based on Parameters & Checks Approves the payment.
Transaction Management	Spending tracking
Billing & Payments	Billing & repayment
Enquiry Module	Customer Details, Lookup

5. Functional Requirements

5.1 Customer Management

- Inputs:
 - Name, Address
 - PAN, Aadhar
 - Income
 - Phone number
- Features:
 - New customer registration
 - Existing customer lookup
 - Duplicate detection
- Business Rules:
 - KYC mandatory
 - One customer = one active record

5.2 Card Management

- Features:
 - Card issuance (Account Number, generating of card number, CVV, Expiry Date, Credit Card Billing Cycle)
 - Card activation/deactivation
 - Card upgrade (replace existing)
 - Card blocking
- Business Rules:
 - Only one active card per customer
 - Upgrade replaces old card
 - Card types defined by Admin

5.3 Authorization

- Features:
 - Account Number Validation
 - Pin Number Validation
 - CVV
 - Expiry Date Validation
 - Card Number Validation
 - OTB Validation
 - Card Status Validation
 - Plan Validation

5.4 Transaction Management

- Features:
 - Capture transactions
 - Maintain history
 - Validate spending
- Business Rules:
 - Card must be active
 - Limit must not be exceeded

5.7 Enquiry Module

- Search Options:
 - Customer ID
 - Card Number
- Outputs:
 - Customer details
 - Card details
 - Transactions
 - Outstanding balance
 - Payment history
 - Card status

6. Admin Module

- Features:
 - Define card types
 - Define control parameters (limit, interest, penalties)
 - Manage eligibility rules

7. Access Control

<u>Role</u>	<u>Access</u>
Admin	Full control
Customer	View & apply

8. Data Requirements

- Core Entities:
 - Customer
 - Card
 - Transaction
 - Billing
 - Payment

9. Business Rules

- Card Rules:
 - One card per customer
 - Upgrade replaces existing
- Transaction Rules:
 - Cannot exceed limit
 - Only active cards allowed
- Billing Rules:
 - Monthly cycle
 - Interest on unpaid
- Payment Rules:
 - Minimum due required
 - Late penalty

10. Exception Handling

- Duplicate customer
- Invalid KYC
- Card inactive
- Limit exceeded
- Payment mismatch

11. Reports

- Customer summary
- Card usage
- Outstanding report
- Overdue report

12. Process Flow Summary

13. Non-Functional Requirements

- Security
- Performance
- Data integrity
- Audit tracking

14. Audit & Logging

Track customer creation, card issuance, transactions, payments, and admin rule changes.
